

## MAGMASOFT® 5.5 Patch 1

MAGMASOFT® 5.5 has been updated with a program Patch 1, version 5.5.0.1.

Patch 1 includes the updated and complete online help for MAGMASOFT® 5.5.

Patch 1 contains a couple of improvements in order to fix the following reported problems:

Random crashes of design calculations in optimization runs on Linux Cluster systems while evaluating geometry volumes, e.g. in the course of Boolean operations (which is executed for each design where the geometry has been changed).

Random crashes in the context of mesh generation.

Several issues concerning simulation crashes and hanging jobs for stress calculations of MAGMAhpd projects.

Simulation Crashes during filling if no tracer particles had been defined in MAGMAhpd projects.

In the 'Result Perspective' the result display with 'X-Ray' has been improved. In particular transparent areas of the system appear clearer if the system is viewed in one of the main axis directions.

If you already use the download option for getting MAGMASOFT®, please login to the website and download the Patch 1. If the option is new within your company we may activate it on demand or alternatively we may send a DVD, see contact data below.

If you have questions or need further assistance, please contact your local MAGMA representative. Our support is accessible via email at [support@magmasoft.de](mailto:support@magmasoft.de) or by phone at +49 241 88 901 333
